

Jonathan Kanaiya

Junior Software Engineer

Junior Software Engineer with hands-on experience building RESTful APIs using Node.js, Express, PostgreSQL, and Prisma ORM. Strong understanding of authentication, data modeling, and API design. Experienced working with Git, Linux environments, and remote-first workflows. Seeking a remote junior software engineering role to further develop expertise in production systems.

Experience

Junior Software Engineer

2026

EventPass Kenya

Kenya

- Led consolidation of a distributed microservices architecture into a single monorepo/monolithic service, simplifying deployment and reducing cross-service overhead.
- Migrated runtime type validation from Typia to Zod, improving type safety consistency and easing long-term maintenance across the codebase.

Skills

Backend

Node.js • Express.js • RESTful APIs • Jakarta EE (basic) • Spring MVC (basic)

Frontend (Supporting)

React • HTML • CSS

Testing

Jest • Vitest • Supertest

Authentication + Security

Passport.js • JWT

Databases

Prisma ORM • PostgreSQL • SQL

Programming Languages

JavaScript • SQL (PostgreSQL, MongoDB) • HTML • CSS • Java (basic) • C# (basic)

Education

Advanced Diploma in Software Engineering

8/2023 - 8/2026

EduLink International School Nairobi

Nairobi, Kenya

Projects

FindWaldoAPI </>

12/2025 - 1/2026

- **Tech Stack:** Prisma ORM, PostgreSQL, Node.js, Supertest, and Express.js.
- API for its pair project, provides a service to assist in validating the guesses of a user, and changing the user's name.
- Deployed and tested API endpoints using CURL and automated tests with Supertest.
- Implemented a PostgreSQL database schema using Prisma ORM.

FindWaldoFrontEnd </> ↗

12/2025 - 1/2026

- **Tech Stack:** React.js, CSS Modules.
- Responsive Photo tagging application inspired by the Where's Waldo Game. The user can make guesses by clicking/tapping a location and selecting the character from a list.

BlogAPI </>

8/2025 - 11/2025

- **Tech Stack:** Node.js, PrismaORM, PostgreSQL, Express, and JWT with PassportJS.
- A Backend application to facilitate the retrieval/creation of blog posts, the authentication of users, and the mutation of posts/comments.
- Built a full backend system supporting user authentication, posts, and comments.
- Designed relational database models using PostgreSQL + Prisma ORM
- Implemented Passport.js authentication with JWT.

Knight Travails </>

12/2024 - 12/2024

- **Tech Stack:** Node.js.
- Built a pathfinding tool using **Graph Theory** and **BFS** to calculate the shortest path in a grid-based environment.
- Implemented custom data structures (Nodes/Linked Lists) to represent and traverse complex move relationships.
- Optimized search efficiency by implementing a "visited" tracking system to prevent redundant calculations and infinite loops.
